

## Earthquake hits Japan!!

This is a picture of the Tsunami

A powerful Earthquake and a Tsunami hits Japan. It was on the 11<sup>th</sup> march 2011, this terrible Earthquake happened deep under the water the ground shook and that is how the Earthquake began. One of the plates moved and some part of the Indonesia sea came over Japan. The richter scale showed a magnitude of 8.9.

This was one of the most powerful earthquakes in the whole world. Now in Japan, the weather is under 0c because it is freezing and it will be harder to rescue people. Many people are trying to help Japan get back on their feet, they are donating money. Rescue people all over the world are putting up rescue tents for people that survived the Earthquake and Tsunami. A 46 year

old man was found on his rooftop 15km out on sea.

Now we are in Japan and we are talking to Mrs Seyami and Mr Dengyasi, "we are so upset because our children were swept away by the massive Tsunami."
